

EXCELPLUS

MILK ADDITIVE

EXCELPLUS™

FOR AN EXCELLENT BEGINNING
MILK ADDITIVE

ExcelPlus contains four key ingredients:

- * Essential Oils and plant extracts derived from herbs and spices
- * Prebiotic – to feed the existing microflora
- * Functional Fibre – fructo-oligosacharide
- * Vitamins, minerals and trace elements – optimal amounts

SEE BACK OF BAG FOR FEEDING GUIDELINES

ExcelPlus Milk Additive is a natural gut conditioning blend, formulated and designed to give your calves an excellent beginning in life.

Its purpose is to support and help develop the calf's rumen and immune system leading to faster growth, heavier weaning weights and healthier contented animals.

MILK ADDITIVE

EXCELPLUS

EXCELPLUS™

FOR AN EXCELLENT BEGINNING
MILK ADDITIVE

High quality ingredients:

The prebiotic and plant extracts used in ExcelPlus are of the highest quality. These ingredients aid feed intake, rumen development and natural immunity, to ensure that each calf is allowed to express its full growth potential.

ExcelPlus is designed to:

1. Encourage early rumen development by stimulating the appetite for increased meal intake promoting faster growth.
2. Produce healthier animals by supporting and strengthening the immune system.
3. Reduce nutritional scours by better utilisation of feed with increased rumen and digestive tract flora.
4. Provide an optimal profile of vitamins, minerals and trace elements for healthier animals.

When to use ExcelPlus Milk Additive:

As soon as possible while feeding colostrum or whole milk and from 4-5 days old if using milk replacer as this is the time when calves are at the most risk from infection and disease.

To ensure the best possible start for calves, add ExcelPlus Milk Additive to colostrum, whole milk or milk replacer for a minimum of 21-28 days.

This ensures good intakes of essential vitamins and minerals until the calf is consuming a sufficient quantity of high quality calf meal.

DIRECTIONS FOR USE:

ExcelPlus is in a suspendable powdered form and mixes easily with milk. Simply mix 5gm per calf into colostrum, whole milk or milk replacer daily.

Included in this bag is one measuring scoop. One level scoop holds 50gm of ExcelPlus Milk Additive.

Each 5kg bag contains 1000 5gm doses – enough to treat approx. 47 calves for 21 days.
